Mr Luc HEYLANDS, General Manager

EUROPOWER GENERATORS started trading in 1990 in the province of Limbourg (Belgium). The company has since outgrown two of its factory premises. At present, the new factory occupies a 35-acre site in Nieuwerkerken (Belgium).

Europower Generators are unique in that they are manufactured according to the customer's specifications. A highly-skilled research and development department is at the customer's disposal, enabling the company to provide a unique service building custom-made machines.

Inspired by a constant drive for total customer satisfaction, the company has grown into the largest manufacturer of small and welding generators throughout the Benelux. This success has been built through offering a full range of first-quality products, supported by superb delivery terms and technical back-up.

Europower Generators was first manufacturer of small generators in Europe to achieve ISO 9001 certification and among its main references are leading telecom organisations, railroad companies, fire departments, major construction companies, rental companies, international traders, humanitarian agencies and non-governmental organisations.

Europower Generators closely monitor the demands of the market. To arrive at a continuous level of improvement in quality, the company invested in the market, in their customers, in personnel, in product quality and in permanent control of the entire process.
